Overview

ARE YOU FACING ANY OF THESE DISTRACTIONS?

- Too many different technologies to manage
- Remote locations don't have support
- Outdated and inefficient technology
- Bandwidth capacity issues
- No time to manage communications
- No experts to manage technology

Consider getting get voice service and secure Internet access through one provider, on one connection. An option like this could help you better focus on your customers and grow your core business.

Description

AT&T Business in a BoxSM provides small locations voice & data services over a single network connection and device. The service is optimal if you are experiencing any of the following:

- No on site IT support
- Upgrading, expanding, or replacing your local area network
- Deploying various voice and data technologies that must work together
- Moving to a new location
- Have a small location with 5-50 employees

Features & Options

AT&T Business in a BoxSM Components Include:

- AT&T Voice DNASM (VoIP) OR AT&T IP Flexible Reach* (SIP trunking)
- AT&T MIS Plus
- Router
- IP VPN
- LAN Switch
- Firewall
- Analog Gateway
- Survivability on Outbound Calling
- WiFi Data Access

*Utilize with a key system, TDM or IP PBX (4Q08 available with TDM PBXs and certified IP PBXs)

Benefits

- Includes unlimited on-net & unlimited local calling (some plans offer unlimited long distance too!)
- Helps you evolve from analog to VoIP
- Replaces disparate voice & data equipment through a single device
- Managed & monitored service so on-site IT resources are not required
- Improved security through support for firewall & IP VPN
